

SUMMARY

Full Stack Developer with demonstrated experience building responsive web applications and optimizing backend systems. Delivered client projects including an AI-powered mixing analysis tool (70% workflow improvement) and educational platforms with real-time content generation. Skilled in React, TypeScript, Python, Django, and FastAPI, with a focus on writing clean, maintainable code. Strong problem-solver with excellent communication skills and a commitment to delivering high-quality, reliable solutions.

WEB DEVELOPMENT PROJECTS

Lead Developer2025 - 2026

MixScope - Audio Mix Analyzer

Developed a custom web application for a professional audio engineer, building an AI-powered mixing analysis tool that reduced mix analysis time by ~70%.

- Optimized audio analysis pipeline by 30% through efficient feature extraction, shared computation across analysis stages, and asynchronous processing for A/B comparisons.
- Integrated Groq LLM with custom-engineered prompts to generate context-aware mixing feedback, delivering insights on LUFS, stereo imaging, spectral balance, and dynamic range.
- Built React/TypeScript frontend with component-based architecture, implementing conditional rendering for analysis states and organized data presentation across multiple tabbed views.

Full-Stack Developer2025

AI Learning Platform

Built an educational platform that generates personalized learning paths using AI-powered content generation and adaptive difficulty assessment across 15 subject areas.

- Engineered asynchronous content generation pipeline using Celery and Redis, reducing user wait time by 30% and enabling background processing while users navigate the platform.
- Integrated Groq LLM API with structured Pydantic validation to generate consistent educational content including assessment questions, topic outlines, and comprehensive lessons with markdown-to-HTML conversion.
- Deployed multi-container architecture on GCP using Docker (Django, Celery, Redis) with Neon PostgreSQL, implementing CI/CD pipelines via GitHub Actions.

Full-Stack Developer2025

MealMind

Developed a full-stack recipe management platform with multi-criteria search, user authentication, and data visualization for analyzing recipe trends and patterns.

- Implemented multi-criteria search system using Django QuerySet filtering with chained queries and Q objects, enabling searches across recipe name, ingredients, cooking time, and difficulty level.
- Designed custom form validation with input normalization methods, improving data consistency by 95% through automated handling of various delimiter formats and special character filtering.
- Integrated Pandas and Matplotlib for real-time data visualization, using base64 encoding to embed charts directly in templates for improved page load performance.

WORK EXPERIENCE

Lead Developer | MixScope - Audio Mix Analyzer2025 - 2026

Freelance

- Managed end-to-end delivery of a client project from requirements gathering to production deployment, maintaining clear communication throughout the development lifecycle.
- Collaborated with a UI/UX designer and audio engineering consultant to translate domain requirements into technical specifications, adapting solutions based on iterative client feedback.
- Delivered a production-ready application that became an active part of the client's professional workflow, meeting strict performance requirements within a 2-month timeline.

SKILLS

Languages

JavaScript - TypeScript - Python

Frontend

React - NextJS - HTML/CSS

Tailwind

Backend

Django - FastAPI - PostgreSQL

MongoDB - Redis - Celery

DevOps & Tools

Docker - Git - Github Actions

GCP

EDUCATION

Full-Stack Web Development Program

CareerFoundry, 2025

Python for Web Development

CareerFoundry, 2025
